Leetonia and Niles. Banquet at the American House. SCHOOLS WITH A RECORD

Springfield Township, Clark County, Ohio, is a community which can well be proud of its country schools. The work that is being done by the superintendent and teachers of the 12 schools in this township makes one forget about the country school prob-lem. In the first place, Supt. J. M. Collins has successfully directed the schools for 10 years. The teachers have an average teaching experience of 12 years. The average age of the teachers is 35 years. One teacher has a record of service of 28 years. Uniform plans for interior decoration and planting of school grounds have been adopted and carried out. In each building is found a library of 205 books neatly placed in a bookcase; a piano or organ for the music exercises; and on the walls are pictures selected subjects of great men and events of historical interest. Cement walks leading to the road, trees and shrubbery carefully arranged in the yard and flower beds, all made by the boys, add greatly to the attractiveness of the school grounds. As a re sult of their more agreeable environment, the children take an unusual interest in their school work. There is practically no absence or tardiness. The schools have not been closed a day during the regular school period for five years. The boys have taken it upon themselves to rid the school grounds of objectional signs; they keep the grounds cleared of weeds; and neat looking wire fences have taken the place of unattractive board ones. And so throughout, the work of these 12 schools is reflecting upon the life of the community in such a way as to make them examples which others might follow to advantage.

Who Does the Work? Chas. F. Credico, at the Canfield boot and shoe hospital. All work neatly and promptly done at reasonable prices.

The Mahoning Dispatch, \$1 5 yes

INTERNATIONAL Harvester manure spreaders have a score of good features in their construction. Each one is

the result of careful field experiment. the result of careful field experiment.

An I H C spreader is low enough for easy loading, yet it has plenty of clearance underneath. The rear axie is well under the load, rear wheels have wide rims and Z-shaped lugs, insuring good traction under all conditions. Frame, wheels, and all driving parts are of steel. Apron tension is adjusted by a simple device. Winding of the beater is prevented by large diameter, and beater teeth are strong, square and chisel-pointed.

International manure spreaders are built in several styles and sizes, low or high, endless or return apron.

styles and sizes, low or high, endless or return apron, for small farms or large. Examination will show sturdiness of construction in every detail. Repairs, if ever needed, may always be had of the local dealer.

Examine International spreaders at the dealer's. We will tell you who sells them, and we will

you interesting catalogues. International Harvester Company of America
